

CASE STUDY

ZyLAB eDiscovery

The Customer

Our customer is a top financial institution serving the USA and abroad.

The Business Case

Our customer wanted to professionalize their eDiscovery process and recognized the extreme importance of doing everything methodically and in accordance with the contemporary standards of the courts. They were looking for a reliable framework for the periodic production of matter-specific responsive documents, but also for the long-term management and assessment of all of their electronically stored information.

CASE STUDY

ZyLAB eDiscovery

ZyLAB's Solution

Our customer selected ZyLAB eDiscovery & Production System to manage the identification, preservation, legal hold, collection, analysis, review and production phases of the Electronic Discovery Reference Model (EDRM).

The on premise software deployment within one of the world's largest financial services companies will facilitate internal forensic data investigations, regulatory events and eDiscovery ECA and production.

ZyLAB was ultimately selected for its advanced handling of PST email files containing nested messages, attachments, and image files; its multi-directional OCR support; its robust legal search tools and audit logs; and its seamless connectors to existing infrastructure. As part of the engagement, ZyLAB will deliver strategic advisement on the IT and legal considerations for data-rich corporations such as multi-national banks, and implement a solid software platform for managing enterprise data and responding to requests for information.
